

Administrators STEM Ambassador Training Program

Skillsets in STEM are critical in developing future innovators and leaders

We know the challenges that many educators and schools face in helping students develop strong, foundational knowledge of STEM.

To counter these issues we have developed the STEM Ambassador Program.

To learn more and to bring the program to your school

Skillsets in STEM are critical in developing future innovators and leaders.

 Our goal is to give educators the tools they need to bring STEM into their classroom through a “learning by creating” approach. Participants learn not only how to use current technology, earn additional income, provide feedback for improvement but also have access to hands on materials for their classroom through the e3 STEM Resource Library. Through hands on training, one-on-one support, on-boarding, success is guaranteed and successful application of learning is ensured and applied from day one.

We know the challenges that many educators and schools face in helping students develop a strong, foundational knowledge of STEM. 

To Counter these issues we have developed the STEM Ambassador Program. This program is ideal for teachers interested in engaging students about STEM through hands on materials. Whether it is to build your own knowledge base or have access to technology kits or build enthusiasm with your students. This program empowers teachers, regardless of their skill level or lack of technical experience with the ability to bring STEM materials and programs to their school.

This program is ideal for teachers who are enthusiastic, dedicated, creative, love learning and are interested in teaching an after school STEM program.
